CENTRE HOSPITALIER UNIVERSITAIRE DE NANTES

[ENG]

Training in patient education for hospital healthcare workers proposed by CHU de Nantes

Objectives

- to learn the theoretical basis of patient education
- to develop patient education actions through practical training on the worksite

Participants will acquire the following skills :

- to establish an educational diagnosis scheme,
- to conduct an individual interview to assess educational needs,
- to establish a therapeutic alliance with the patient,
- to design a group and individual educational needs assessment session,
- to conduct a group and individual patient education session,
- to assess knowledge and skills acquired by patients,
- to write a patient education program,
- to adapt a patient education program to its context.

This training will include

- lectures and discussions on the concepts and principles of patient education (6 days)
- a practical training where participants will use the newly acquired knowledge to implement patient education actions on their worksite. The teacher will help participants design patient education sessions specific to the chronic disease treated in their department. (2-3 months)
- a post-training evaluation at 6 months

Participants

A group of 10-15 health professionnals and/or medical social workers in charge of chronic disease patients. The concerned diseases could be the following : diabetes, asthma, COPD, HIV, hepatitis C, B, hemophilia, overweight, inflammatory bowel diseases, chronic kidney disease, rheumatoid arthritis, sickle cell disease, cancer, Besnier's prurigo, food allergies, chronic heart failure, stroke, …

Language

The training can be delivered in French, English or any other local language (with translation service).

Cost

The cost of this training program is determined with the beneficiary institution based on the duration and conditions in which the training is delivered.

This training can be delivered through a partnership established between CHU de Nantes and the beneficiary institution. In this case, funding to cover all or part of the costs of the training can be obtained through the call for project proposals entitled « Coopération hospitalière internationale » launched by the French Ministry of Health. The call file must, however, be completed by December 1st 2015.
